PROFESSIONAL SUMMARY

- Java Developer with 4+ years of experience delivering scalable, cloud-native applications using Java, Spring Boot, and React.js across enterprise and fintech domains.
- Experienced in building microservices architectures, designing REST APIs, and implementing event-driven systems using Apache Kafka to support high-throughput and reliable data processing.
- Worked on cloud platforms including AWS and GCP, leveraging Docker, Kubernetes, and CI/CD pipelines to develop and deploy resilient, production-ready applications.
- Skilled in securing applications using Spring Security, JWT, and OAuth2, with a strong foundation in system design, distributed systems, and modern software engineering practices.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, SQL

Backend Development: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Spring Cloud, Spring WebFlux, Microservices, REST APIs, GraphQL, OpenAPI (Swagger), Feign Client, Resilience4j

Frontend Development: React.js, Angular, HTML5, CSS3

Data & Persistence: PostgreSQL, MySQL, MongoDB, Redis

Cloud & Distributed Systems: AWS (Lambda, API Gateway, ECS, EKS, S3, CloudFront, IAM), GCP (Cloud Run, Pub/Sub), Serverless Architecture

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, Azure DevOps, Terraform, Maven, Gradle

Event Streaming & Integration: Apache Kafka, Event-Driven Architecture

Security & Authentication: Spring Security, JWT, OAuth2, RBAC

Observability & Monitoring: Prometheus, Grafana, Splunk, datadog

Software Engineering Practices: System Design, Design Patterns, SOLID Principles, Agile, Test-Driven Development

PROFESSIONAL EXPERIENCE

Java Developer

Aug 2025 - Present

CBRE (IFM Hub Project) | Richardson, TX

- Built four Spring Boot microservices in Java to manage billing operations including charge calculation and invoicing, which increased transaction throughput by 35% and stabilized processing for high-volume financial data.
- Designed RESTful APIs using Spring MVC and documented endpoints with OpenAPI, while enabling Kafka-based event streaming to support asynchronous communication and improve integration scalability across ERP systems.
- Optimized PostgreSQL schema design with Spring Data JPA and Hibernate by applying indexing and transaction control, which improved query performance by 40% and eliminated duplicate billing entries.
- Introduced fault tolerance using Spring Cloud and Resilience4j patterns such as circuit breaker and retry, which reduced API failure rates by 30% and ensured consistent service availability under load.
- Secured backend services through Spring Security with JWT and RBAC, which enforced role-based access and ensured compliance with enterprise-grade data protection standards.
- Automated CI/CD pipelines using Azure DevOps integrated with Maven and Docker, which shortened release cycles by 45% and improved build and deployment reliability.
- Deployed containerized microservices using Docker on Kubernetes environments to support auto-scaling and load balancing, which improved uptime and maintained performance during peak billing operations.
- Implemented monitoring using Prometheus and Grafana along with centralized logging, which enabled real-time visibility into system performance and reduced mean time to resolution by 35%.

Java Developer Intern

Feb 2025 - Jun 2025

Globepey | Plano, TX

- Engineered and developed REST APIs using Java and Spring Boot for core payment workflows, which improved service modularity and increased backend maintainability by 40% across transaction systems.
- Integrated external payment gateways and internal services through REST APIs and Apache Kafka, enabling asynchronous data exchange that improved transaction reliability and processing efficiency.
- Refined MySQL performance using Spring Data JPA and Hibernate by applying indexing and optimized joins, which reduced API response time by 50% under concurrent user load.
- Strengthened service resilience by implementing Resilience4j with Spring Boot for circuit breaker and retry logic, which improved API availability and minimized impact from downstream failures.
- Enforced secure access to APIs using Spring Security with JWT and RBAC, which ensured controlled authorization and protected sensitive financial transactions.
- Improved code quality by developing unit and integration tests using JUnit and Mockito within Maven builds, which increased test coverage and reduced production defects by 30%.
- Contributed to CI/CD workflows using GitHub Actions integrated with Docker-based builds, which improved automation consistency and streamlined development workflows.

Full Stack Developer

Oct 2021 - Aug 2023

Ford Motor Company | Chennai, India

- Built scalable backend services using Java and Spring Boot while developing interactive UI components with React.js for FordPass features, which improved application responsiveness by 40% and enhanced real-time user experience.

- Implemented and exposed REST APIs using Spring MVC and integrated Apache Kafka for event-driven vehicle data processing, which increased system throughput and reduced latency in handling high-volume telemetry streams.
- Strengthened application security by implementing Spring Security with JWT and RBAC across microservices and frontend integration layers, which ensured controlled access and safeguarded sensitive vehicle and user data.
- Improved database efficiency by optimizing PostgreSQL and MongoDB queries using Spring Data JPA and Hibernate, which reduced data retrieval time by 35% and enhanced performance of analytics dashboards.
- Containerized full stack applications using Docker and deployed them on Kubernetes with GCP Cloud Run, which enabled auto-scaling and reduced deployment time by 50% across environments.
- Automated build and deployment processes using Jenkins integrated with Maven and SonarQube, which increased code quality and reduced deployment failures by 30% during continuous delivery cycles.
- Enabled real-time monitoring by integrating Prometheus, Grafana, and Splunk for logging and metrics tracking, which reduced incident resolution time by 40% and improved production stability.
- Applied SOLID principles and design patterns across Spring Boot services and React components, which improved maintainability and supported faster delivery of new features in an Agile environment.

Software Engineer

Sep 2020 - Sep 2021

Appzone Technologies | Chennai, India

- Engineered a full stack healthcare claims platform using Java with Spring Boot for backend services and Angular for frontend modules, which improved claims processing efficiency by 30% and streamlined end-to-end workflows.
- Created REST APIs using Spring MVC for claims submission, eligibility checks, and reporting features, which enabled seamless integration between modules and reduced manual processing delays across the system.
- Developed responsive UI components using Angular and integrated them with backend APIs, which enhanced user interaction and improved application usability for claims analysts and operations teams.
- Enhanced MySQL database operations using Spring Data JPA and Hibernate with indexing and query tuning, which improved application performance and reduced data retrieval time by 35%.
- Established unit testing using JUnit within Maven-based builds following Test-Driven Development practices, which increased code reliability and reduced production defects by 25% during releases.
- Provisioned application deployments on AWS using Elastic Beanstalk with Docker-based packaging, which improved deployment efficiency by 25% and enabled consistent environment configurations.
- Refined application components using design patterns and SOLID principles within Spring Boot services, which improved code maintainability and reduced technical debt across modules.
- Coordinated with cross-functional teams to align API development and frontend integration using REST standards, which improved delivery timelines and ensured compliance with healthcare data requirements.

PROJECTS

Enterprise Billing Microservices Platform

- Built microservices using Java, Spring Boot, and Spring Cloud with Apache Kafka for billing and invoicing workflows, which improved scalability and reduced processing latency by 55% under high transaction loads.
- Developed REST APIs using Spring MVC secured with Spring Security and JWT, which ensured reliable service communication and protected financial data across distributed systems.
- Deployed applications using Docker and Kubernetes with CI/CD pipelines in Jenkins on AWS, integrating Prometheus and Grafana for monitoring, which improved deployment efficiency and system observability.

Real-Time Order Processing System

- Implemented event-driven backend services using Java and Spring Boot with Apache Kafka for order processing, which improved throughput and reduced processing delays by 50% during peak traffic.
- Built frontend components using React.js integrated with REST APIs, which enabled real-time order tracking and improved user interaction across application workflows.
- Deployed containerized services using Docker and Kubernetes on GCP Cloud Run, which enabled scalable processing and improved application availability across distributed environments.

Cloud-Based API Gateway & Authentication System

- Developed centralized API gateway using Java and Spring Boot with Spring Security, JWT, and OAuth2, which improved authentication control and reduced unauthorized access across microservices.
- Implemented token management using Redis integrated with secure REST APIs, which improved authentication response time and reduced latency for high-volume API requests.
- Deployed services using Docker integrated with AWS API Gateway, which improved API routing efficiency and ensured scalable and reliable backend communication.

EDUCATION

Master of Science in Computer Science

Aug 2023 - Dec 2025

University of North Texas

CERTIFICATIONS

- [AWS Certified Solutions Architect](#) - Associate
- Java Programming and Software Engineering Fundamentals - Coursera
- Spring Framework Specialization - Coursera
- Building Scalable Java Microservices with Spring Boot and Spring Cloud - Coursera
- Full Stack Web Development with React - Coursera
- DevOps Foundations: CI/CD - LinkedIn Learning
